

HARSH VERMA

SQL Server Database Administrator | Azure Database Administrator (DP-300 Certified)

Mumbai, India | +91-7977211987 | harshverms@gmail.com | [Website](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

SQL Server Database Administrator with 4+ years of production experience managing 500+ environments (2GB–25TB) for mission-critical payment gateway and insurance platforms. Microsoft Certified Azure Database Administrator Associate (DP-300), with hands-on lab experience in Azure SQL Managed Instance migration (Log Replay Service), ARM/PowerShell-based automation, and IaaS/PaaS database provisioning. Strong on-premises foundation in high availability (Always On, Distributed Availability Groups, Log Shipping, Mirroring, Replication, Geo-Replication, Failover Clustering), disaster recovery, and major incident management for high-transaction-volume systems. Recognized for diagnosing complex production issues under pressure and delivering measurable results — including a 93% query performance gain that resolved a CPU-saturation incident on a live payment platform. Currently transitioning this on-premises expertise into full-time Azure cloud database administration.

TECHNICAL SKILLS

Databases: SQL Server 2022 / 2019 / 2017 / 2016 / 2014 / 2012, Azure SQL Managed Instance, Azure IaaS & PaaS Database Solutions

High Availability / DR: Always On Availability Groups, Distributed Availability Groups, Database Mirroring, Log Shipping, Replication, Failover Clustering, Geo-Replication, Failover Groups

Performance & Tuning: Query Store, Execution Plan Analysis, Index Maintenance, Table Partitioning, Blocking & Deadlock Resolution

Security: Transparent Data Encryption (TDE), Dynamic Data Masking, Role-Based Access Management

Operating Systems: Windows Server 2022, 2019, 2016, 2012, 2008 (Standard & Enterprise)

Tools & Platforms: ServiceNow (SNOW), Jira, Commvault, SentryOne, Rubrik, Foglight, SSH, RDP, ARM Templates, PowerShell, Azure Elastic Jobs, Azure Automation Runbooks

PROFESSIONAL EXPERIENCE

Executive DBA | Worldline

Jan 2025 – Present

Payment gateway platform processing millions of merchant transactions daily across diverse payment modes

- Administer and support SQL Server infrastructure underpinning a high-transaction payment gateway, maintaining uptime for revenue-critical systems.
- Diagnosed and resolved a CPU-saturation incident after a newly enabled application feature drove concurrent sessions from a handful to 100+ and CPU from ~10–15% to 100%; deployed a Query Store-recommended index (93% projected improvement) during a low-traffic window, restoring CPU to baseline and cutting concurrent sessions back to 5–6.
- Led an INT-to-BIGINT column conversion on a high-volume partitioned production table after the INT range neared exhaustion, executing a precise sequence (drop non-clustered index → alter column → rebuild index) with zero data loss.
- Root-caused and resolved a log shipping outage caused by an erroneous SQL Server Agent job execution on a secondary replica that broke the shipping chain; restored service via full, differential, and log restores, then implemented preventive job controls to prevent recurrence.
- Lead major incident calls, diagnosing root causes under pressure and restoring service quickly to minimize business impact.
- Execute DR drills (switchover/switchback) using Always On, Database Mirroring, Log Shipping, and Replication to validate disaster recovery readiness.
- Apply SQL Server patching, Service Packs, and Cumulative Updates across multiple versions and environments to keep production systems secure and current.
- Automate routine database operations via SQL Server Agent jobs, proactively troubleshooting failures to safeguard infrastructure uptime.
- Manage daily and monthly database archiving processes to control data growth and sustain performance on high-volume transactional databases.
- Implement table partitioning strategies on large datasets, improving query performance and long-term manageability.

- Managed and supported 500+ SQL Servers (2GB–25TB) across Production, Development, Integration, and QA environments for multiple insurance clients, ensuring high availability and peak performance.
- Diagnosed and permanently resolved a recurring nightly automatic failover on an AWS EC2-hosted SQL Server instance, root-causing IO contention from overlapping backup jobs, SQL Agent jobs, and DMS replication load; resolved by rescheduling jobs and redirecting read traffic to the secondary Always On replica.
- Led resolution of a P1 connectivity incident by identifying a disabled login on the failover replica rather than overriding an unexplained security control; executed a controlled failback to restore access safely and quickly.
- Created and managed database users, roles, and permissions in line with least-privilege access principles.
- Led decommissioning and migration of SQL databases to new servers, including full migration of jobs and logins across all environments.
- Diagnosed and resolved performance issues including high CPU, high memory, and blocking, applying tuning techniques to optimize server health.
- Designed and implemented backup and recovery strategies and automated jobs aligned with business continuity requirements.
- Resolved critical issues during Major Incident calls through strong communication and rapid problem-solving, minimizing downtime.
- Took ownership of a major project transition into Capgemini, learning the infrastructure, processes, and key stakeholder relationships to ensure seamless support continuity.
- Partnered with stakeholders to analyze database issues and deploy production changes proactively, preventing costly outages and enabling point-in-time recovery on request.
- Trained and mentored new joiners on day-to-day DBA tasks, client communication, and incident/service request management.
- Implemented Transparent Data Encryption (TDE) to secure sensitive data at rest.
- Resolved user-reported connectivity issues and performed failover/failback activities in clustered environments.

KEY ACHIEVEMENTS

- Received the highest performance rating (Rating 1) at Capgemini for proactive contribution to the team.
- Awarded “Extra Miler of the Month” (January 2024) for active participation and effort on the project.
- Awarded “Star of the Month” (May 2024) for outstanding performance within the SQL Database team.
- Secured 2nd position in department for 2 consecutive years during graduation.

AZURE CLOUD TRAINING & HANDS-ON LABS (DP-300 PREPARATION)

Self-directed lab work completed in preparation for the DP-300 certification

- Migrated on-premises SQL databases to Azure SQL Managed Instance using the Log Replay Service (LRS).
- Automated Azure resource deployments using ARM templates and PowerShell scripts.
- Scheduled and managed recurring database tasks using SQL Server Agent and Azure Elastic Jobs.
- Built an Azure Automation Runbook to automate index rebuild maintenance.
- Configured cloud-native database backup and restore operations utilizing Azure Blob Storage.
- Provisioned and managed Azure IaaS (SQL Server on VMs) and PaaS (Azure SQL Database/Managed Instance) solutions.
- Implemented advanced backup and recovery strategies, including long-term retention (LTR) policies.
- Enforced data security standards using Transparent Data Encryption (TDE) and Dynamic Data Masking (DDM).
- Optimized database performance using Query Store, Query Performance Insights, index maintenance, and statistics updates.

CERTIFICATIONS

- [Microsoft Certified: Azure Database Administrator Associate \(DP-300\) — Verify Credential](#)
- [Microsoft Certified: Azure Fundamentals \(AZ-900\) — Verify Credential](#)
- SQL (HackerRank)
- SQL Database Administration
- ITIL 4 Foundation

EDUCATION

- B.Tech, Electronics and Communication Engineering — AKTU, Lucknow (2021)
- HSC (Science) — Maharashtra State Board (2017)
- SSC — ICSE Board (2015)
